

Establishment

The property consists of 5 acres and was purchased in October of 1998. It has undergone a complete metamorphosis with the establishment of food production gardens and the implementation of wildlife habitat restoration. We keep mechanization to a minimum and use a walk behind lawn mower to maintain walking paths or keep invasive plants in check, a string trimmer to groom garden beds and a rototiller to establish new garden beds, revitalize an existing one or control pest populations. After completing treatment for aggressive breast cancer in 2005-2006 I determined it was my good eating habits and using much of my own food that prevented any lymph node infiltration so in 2007 I started selling my excess production at my local farmers' market. I focus on heirlooms for history, flavor and genetic diversity.

Production Gardens

- ◆ Baked goods made from corn flour, cornmeal and heirloom vegetables.
- ◆ High tunnel and low tunnel gardening for four-season food production.
- ◆ 6 varieties of hand crafted garlic.
- ◆ 3 varieties of Native American corn ground on site.
- ◆ 1 variety of popcorn.
- ◆ 6 varieties of heirloom dried beans.
- ◆ Heirloom vegetables.
- ◆ Wild crafted items made from fresh and dried plant material grown on property.
- ◆ Reclaimed wood succulent planter boxes.
- ◆ Nursery - Kentucky native plants, cultivars, herbs, succulents and heirloom vegetables.

Habitat Gardens

- ◆ Wildlife habitat restoration of property begun spring of 2003.
- ◆ Repopulating the land with Kentucky native plants to provide food and shelter for wildlife.
- ◆ Allowing natives found naturally on the property to grow and expand their presence.
- ◆ Provide a chemical free environment for wildlife.
- ◆ Educate homeowners about the use of native plants for home scale gardening and habitat restoration.

Vintage, reclaimed, recycled + farm grown

Philosophy

We believe in living closer to the land. We advocate and practice sustainable production methods by utilizing native plantings as predator habitat to eliminate the need for chemical applications.

We specialize in heirlooms such as rare black popcorn; very rare Native American flour corn and dried beans; value added jams, jellies and baked goods made from heirloom vegetables and ground corn flour or cornmeal. We plan for a mix of native plantings for beauty and wildlife support alongside the cultivated production gardens. We continually improve our soil by the addition of organic materials and minimum use of tillage equipment. Our only use of chemicals is for the control of invasive plants that were brought on to the property by previous owners. All garden production is done by hand in addition to harvesting, processing and packaging.

Other

There is a \$5.00 per person charge for property tours.

Group tours and presentations available for a predetermined charge.

CSA Registration
Spring/Summer Fall/Winter Shares

Garlic Bed

Sustainability

Everything taken off the land is put back by use of composting. Grass clippings and straw are effective mulch and greatly reduce the need for weeding while providing soil stability through temperature and moisture moderation and pest deterrence. All plant material benefits from the use of mulch by adding organic matter back into the soil.
